- Temporary Cooling for machinery maintenance
- Hotels, Clubs and Restaurant cooling
- Horse stable and Kennel cooling
- Green House Cooling and Humidification
- Panel Shop and Garage areas (TAFE Colleges)
- Hire Industry
- Mining

Fabricated from stainless steel the PortaMist portable misting unit, manufactured in Australia by Ozmist, is a star performer.

It provides incredible cooling both indoors and out and requires only a garden hose and standard power supply to run.

With large pump up tyres it is easy to move over the roughest ground. It has an extremely quiet 240 volt triplex piston pump that pressurizes water to 1000 PSI.

The unit comes with a powerful 3 speed, oscillating fan that will project cool air up to 12 meters from the unit. The fan is height adjustable and can be fixed not to oscillate, enabling air to be directed to one place.

A six nozzle misting ring is fitted to each fan face.

A standard 10 amp power supply will be required for the pump module and fans. Plug it in anywhere!

The system requires only minimal maintenance and comes with a 12 month parts and labor warranty.
